New Entrant Tuberculosis (TB) Screening Service

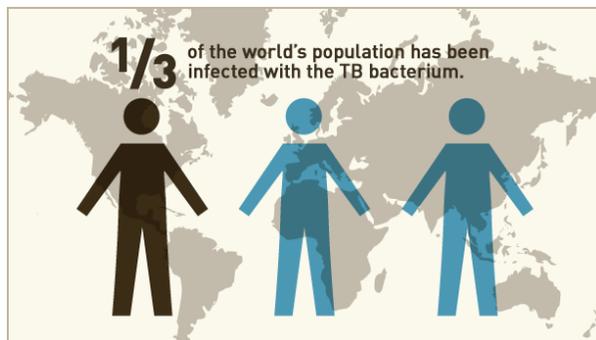

**The TB and New Entrant
Assessment Nursing Service
covering York and North
Yorkshire**

01423 555734

FACT : In the world today

Almost 9 million people are diagnosed with active TB every year.

2 billion people (1 third) have latent TB infection (LTBI).

The screening is for active TB and latent TB (LTBI) but what is the difference?

What is active TB?

- A bacterial disease when TB germs have been breathed in and are active anywhere in the body.
- It can be passed to others.
- It can make you feel unwell e.g. cough, night sweats, weight loss.
- It can show up on an x-ray.
- It will need treatment to be cured.

What is latent TB infection (LTBI)?

- When TB germs have been breathed in but are sleeping in the body.
- It is not infectious to others.
- It does not make you feel unwell.
- It does not show up on an x-ray.
- LTBI **CAN** wake up at any time to become active TB.

It is important that you attend for this test even if you have had a chest x-ray as part of screening before arriving in the UK, and are feeling well.

The screening and any treatment are free.

Why have I been offered new entrant TB screening?

We understand you/your family have arrived in UK within the last 5 years and have spent time in a country with a high rate of TB.

How will the TB screening test be done?

Adults: Depending on your age you may be offered the following,

- A simple skin test.
- A simple blood test for TB.
- A chest x-ray.

(if you are pregnant it is still **SAFE** for you to have the test)

Children:

A simple skin test

(2 appointments, 1 for the test and 1 to check the test).
