

Tropicamide Drops Ophthalmic Photography

Tropicamide 1% eye drops are used to enlarge the pupils to enable photographs to be taken of the back of your eyes.

These drops may cause blurring of your vision and make you sensitive to bright light for approximately 2 hours.

You are advised not to drive or operate machinery until your sight returns to normal and your eyes are comfortable. You may find it helpful to wear sunglasses.

Following this appointment if you experience any of the following symptoms, pain or severe discomfort in or over your eyes, or increasing loss of vision please contact either:

- **The Eye Clinic: within the hours of 9.00 – 5.00 Monday to Friday (tel. 01423 553195 or 01423 553423)**
- **Otherwise contact your local Hospital Accident & Emergency Department**

If you require this information in an alternative language or format (such as Braille, audiotape or large print), please ask the staff who are looking after you.
